Education

Bachelors of Data Science and Business Analytics (9.9/10 CGPA)

Sep'23 – Present

School of Data Science and Business Intelligence

Goregaon, Mumbai

- **Related courses:** Database Management System, Statistics, Python Programming, Data Analytics, Machine Learning, Natural Language Processing, Data Visualization, Exploratory Data Analysis, R Programming

Skills

Languages	Python, R, Java, Javascript
Top Libraries Used	Scipy, Statsmodels, Sklearn, Pandas, Matplotlib, Numpy, Plotly
Database Languages	MySQL, PostgreSQL, SQL Server, Oracle, SQLite
NLP	Text Preprocessing, Sentiment Analysis, Text Classification
Statistics	Descriptive Statistics, Inferential Statistics, Probability
Mathematics for ML	Linear Algebra, Matrices
Data Science	Data Cleaning, EDA, Data Visualization, Web Scraping, Feature Engineering
Visualization	Power BI, Excel

Projects

Youtube Comments Sentiment Analysis | Python, Numpy, Pandas, Sklearn, mlflow, flask

- Applied NLP preprocessing techniques (tokenization, stopwords filtering, lemmatization) to clean YouTube comments, optimizing text data for accurate sentiment analysis.
- Achieved 85% accuracy with a tuned LightGBM model for classifying comments as positive, negative, or neutral.
- Built a Chrome extension for real-time sentiment analysis, with a backend API for dynamic predictions.
- Used MLOps techniques with MLFlow and automated pipelines for model versioning and deployment, ensuring scalable, production-ready performance.

Credit Risk Modelling | Python, Numpy, Pandas, Scipy, Sklearn, Streamlit

- Developed a robust machine learning model that accurately predicts borrower default likelihood and classifies borrowers into four distinct risk categories (P1, P2, P3, P4).
- Achieved an impressive accuracy score of 82%, demonstrating the model's effectiveness in identifying potential default risks among borrowers and enhancing decision-making for banks.
- Integrated Streamlit to create an intuitive web interface, allowing users to easily upload CSV files and receive instant predictions, enhancing user accessibility and experience.

Mumbai Real Estate Analysis And Prediction | Python, Numpy, Pandas, Scipy, Statsmodels, Sklearn, Streamlit

- Created a project that provides users with insights into Mumbai flat prices through data scraped from Housing.com using Selenium and BeautifulSoup, involving thorough data cleaning and preprocessing for high-quality input.
- Conducted in-depth exploratory data analysis to uncover trends and detect outliers, employing techniques like box plots and histograms to visualize key findings for better user understanding.
- Built a predictive model to forecast flat prices, complemented by an interactive UI that features sections for price predictions, detailed analysis, and personalized property recommendations based on user preferences.

Internships

Intern

Jun'24 – Feb'25

Infinity Learning

- Engaged with an EdTech startup, specializing in training on technologies like Power BI and SQL.
- Created educational case studies on Excel, Power BI, SQL, Python fundamentals, and the Pandas library.
- Collaborated with team members to ensure content accuracy and relevance for target audiences, enhancing skills in creating educational content tailored for different learning levels.

Achievements / Certifications

- 5-Star (Gold Badge) coder in Python / SQL
- 4-Star (Silver Badge) coder in Problem Solving
- Secured 1st rank in Power BI Dashboard presentation at college
- Python Basic - HackerRank
- SQL Basic - HackerRank
